

@item yellow

This color is used to display lines that have been modified compared to reference file.

@item green

Used to display lines added compared to the reference file; in other words, lines that are not present in the reference file.

@item red

Used to display lines removed from the reference file; in other words, lines that are present only in the reference file.

@end table

These colors can be configured, @pxref{The Preferences Dialog}.

! As with all highlighted lines in GPS, the visual differences highlight visible in the Speed Column at the left of the editors.

When a visual comparison is created, the Locations View is populated with entries for each chunk of differences, and can be used to navigate between those.

```
- @iftex
- @cindex screen shot
- @image{visual-diff, 12.7cm}
- @end iftex
```

```
@ifhtml
@cindex screen shot
@image{visual-diff}
@end ifhtml
```
